

Vemlidy[®] (tenofovir alafenamide)

Use in Fatty Liver Disease

Gilead Sciences, Inc. is providing this document to you, a US Healthcare Professional, in response to your unsolicited request for medical information. Some of the data may be outside of the US FDA-approved Prescribing Information. Gilead Sciences, Inc. does not intend to offer an opinion regarding the clinical relevance of these data or the advisability of administering any drug in a manner inconsistent with its approved labeling.

This document provides available information regarding Vemlidy[®] (tenofovir alafenamide [TAF]) for the treatment of chronic HBV and its use in patients with fatty liver disease (hepatic steatosis).

The full indication, important safety information, and boxed warnings are available at: https://www.gilead.com/-/media/files/pdfs/medicines/liver-disease/vemlidy/vemlidy_pi.pdf

Product Labeling¹

There is no information in the TAF product labeling regarding the treatment of subjects with comorbid fatty liver disease (hepatic steatosis).

Available Data

Study Design and Demographics²

A prospective, cohort study in participants with chronic HBV evaluated changes in liver stiffness measurements (LSM) and controlled attenuation parameter (CAP) measures in those who received TAF treatment for >12 months (N=67). Transient elastography was performed at baseline and Month 12.

Results²

Treatment with TAF for >12 months resulted in improvements in LSM but not steatosis (Figures 1 and 2).

Figure 1. LSM Categories at Baseline and Month 12²

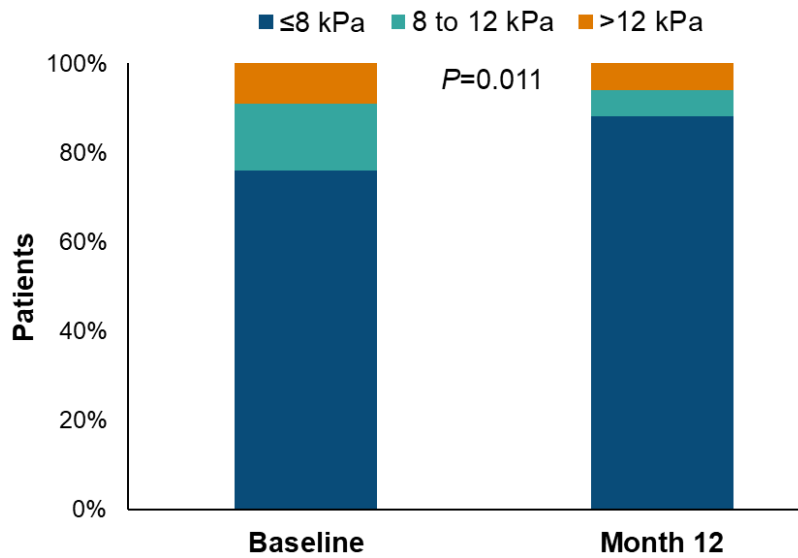

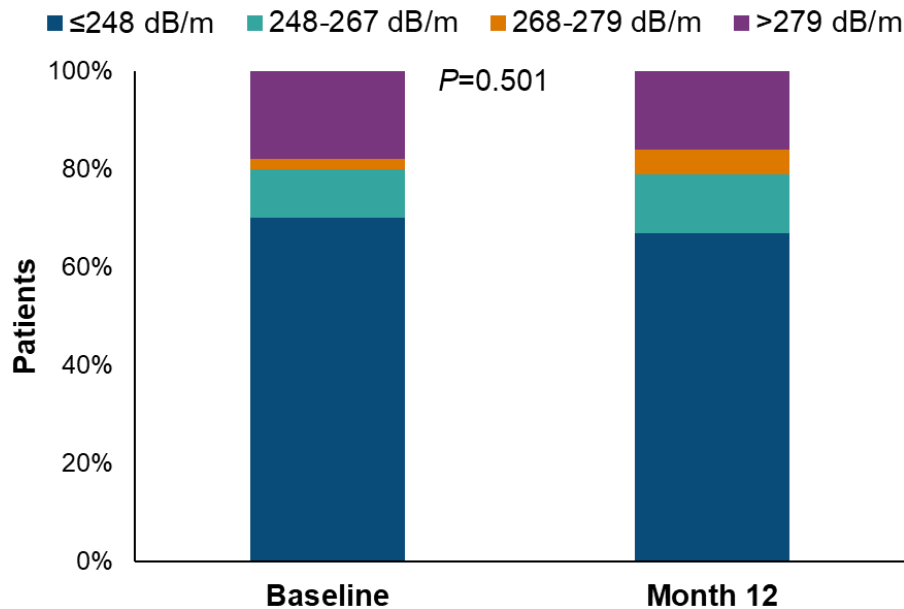

Figure 2. CAP Measurements at Baseline and Month 12²
